

Weekly Challenge

Console ToDo List

Primary Challenge

Create a .NET Core Console app that has the following actions available to it: Add <todo>, Print (top 3), PrintAll, and Done (with todo number). Just store the data in memory. No need to store it in a database.

Bonus Challenge

Add a method called ReOrder that moves a todo up or down in priority by the user identifying the new number it should be.

“Practice makes the master.”
