

## **PERSONAL STATEMENT 2**

**Read the following personal statement and think about the strengths and the weaknesses. Note down your ideas.**

Choose the Science and Medicine is endless discovery for all your life. From ancient ages, people was observed the human's body work, however it is still keep a lot of secrets. Natural sciences are unique disciplines that open your eyes on the World and on yourself. The human's body is perfect organism were trillions cell's connection create unrepeatable system. Surveillance after microorganisms always uncommonly captivated me. It is precipitate me in awe of how much the Science give us and how it has changed life of millions people. In this life, no exist more important and valuable things, that lifespan and health. I cannot imagine the better way for myself than makes people's life longer and healthier. The course in Biomedical Science will provide for me wide range of knowledge about human's body, appearance disease, cell biology. That will give me opportunity continue my education in medical area. Especially I am interested in cardiac surgery.

In encourage my interest I was working as a volunteer in local hospital and had the greatest opportunity to observe how were working GP surgeons, therapists, pediatricians, cardiologists and other doctors. I was fascinated by their good coordinated and highly qualified work. I spent a lot of time with team surgeons and I could see how the serious condition's patient had become the healthy men. I also had the chance to help the nurseries take care about patients. I could speak with patients or bring them tea. It gave me comprehension difficulties work with illness people and show me that doctor have to be not only good specialist in his/her area, but also psychologist, who can find the way to explain and convince for patient in necessity any tactics. Besides this experience helped me understood the importance every stage in treatment and sometimes just a kind word can help the patient to feel a little bit better.

Now I am taking University Foundation Year, during this course I am studying Academic Presentation that expands my knowledge in using software packages to support studies in Higher Education; Contextual Studies that give me understanding the background to key areas of scientific enquiry, the relationships between the main areas of science and the nature of scientific enquiry. It will develop public speaking skills and research skills. Another subject that will help me be able to examine, interpret and criticise an academic text using a critical approach, identify and avoid plagiarism and present effective and coherently structured academic arguments is Critical Thinking and Dissertation Development. Moreover I will study Bioscience that will give me understanding how to analyse and solve science problems across a wide variety of biosciences, understanding the interrelationships of bio systems and using scientific methods to tackle issues and problems. Experimental Science will help me design experiments and present arguments from observation and scientific literature and write in scientific academic style. As well I will study Mathematics that included clinical statistics and quantitative and qualitative amylases. I was joining to debating clubs which could be not only assistant which training my abilities in proving arguments, but in listening and understanding other view.

I have been taking course in Economy and Business Management for five years. I have studied mathematics for two years that improved my skills in solving problems and analyzing information. Psychology, Pedagogy and Sociology developed my attainments in communication with people and working with team. This course has helped me became more independent,

determined and self-organized; also it has developed my abilities in self-discipline and stubbornness.

I enjoy skiing and kayaking, both are extreme sports and they are improve my skills in taking control under my emotion, surmount difficulties and continue self-cultivation. Likewise I was teaching how to skiing the group of children in our local ski-school. It was very momentous experiment, because not only I taught children, but also they taught me to be more lenient, but insistent.

As well I like reading; especially I am interested in classic literature and scientific journal. It expands outlook, gives knowledge and allow knowing the last news in science.

Travelling is another hobby that I enjoy in free time. I take pleasure in camping. It gives me the chance to be in nature and sight the place where rarely was men, that we have a lot of in Russia. However I like travelling abroad too and discover new countries. Open for myself new cultures, tradition, architecture it always experience to open something in yourself. And learn to understand other people, be open-minded and respectful.

Correspondingly, I was playing in schools theatre. We were staged different plays from the repertoire famous Russian and foreign authors. After that our groups represented it for teachers, parents and other guests. Before this experience I was very shy, but theatre helped me overcome myself and be confident. I think that it will help during presentation and public speech.

Since I finished my high school I was working as a manager. In my responsibilities was included work with clients, constitute contracts, prepare all acts for directors and work with suppliers. This experience has elaborated my proficiency in organizing complicated process, with recognition every detail. Also, it has expanded my computer skills and abilities working with team that will help me in my future studies inasmuch as in medicine and science it is parcel part of operation. And at the same time I was studying at university. That similarly helped me improve my time management's skills. I have decided to choose my first degree in economy, because of my family own the business and I wanted to help them as I can. But since first course I understood that I totally do not like this degree and I will not help my parent if I am not enjoying this subject. Medical science is the subject that I was interested in. it was difficult decision to change my course, but now I am satisfy and absolutely sure that this course is that I really want to do.

I would like to study in the UK, because here one of the highest level of teaching and there is a lot of research in medical area. Also I wish to find the new ideas. I think that study abroad can give me more experience, at the same time be involving in exiting process. I can learn more about different culture and people. And I can bring them a part of my own culture, country and knowledge.

At the end of this course I would like to continue my education and take the course in medicine, especially I have an interest in surgery. This course in biomedicine can help me get a wide knowledge in anatomy, biochemistry and series other very important subjects for me.
