

# Square Medallions Supplies

- Black inking pen, my favorite is the [Sakura Micron 01](#)
- Hot-pressed [watercolor paper](#) tile 4x4 inches printed with grid (template provided in the lesson)
- Black colored pencil. My favorite is the [Polychromos](#)

- No printer? Optionally use a small ruler and pencil to mark the grid

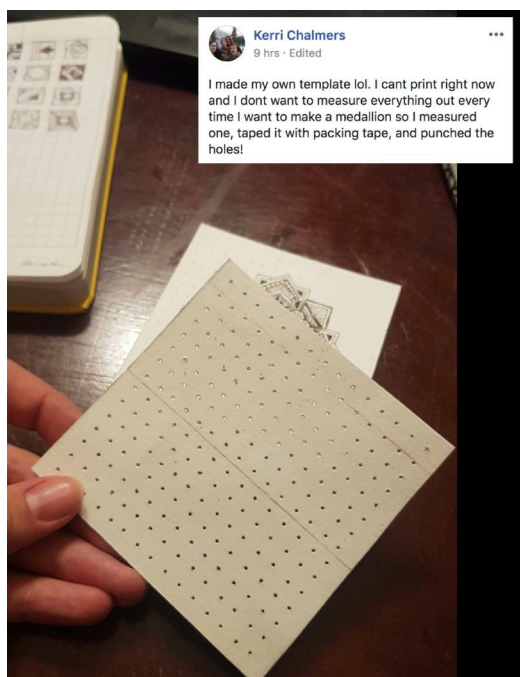

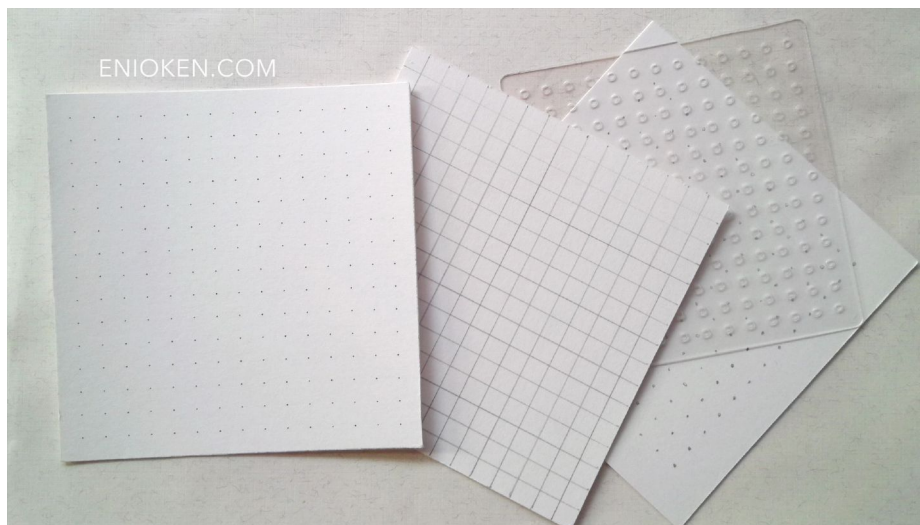

- Optional: use a grid stencil to mark dotted grid. Find a 3.5 inch one [here](#).

- Optional: create and print your own grid using one of these websites. Keep in mind that I do not personally own or endorse any of these, so caution when using.

- 1) [Gridzzly](#): super easy to use, my favorite.

- 2) [Incompetech](#): offers many different options and different selections. Careful with the ads and misleading green buttons.

- 3) [Printablepaper](#): huge selection of shapes, but doesn't offer option to customize the paper size.

I made my own template lol. I cant print right now and I dont want to measure everything out every time I want to make a medallion so I measured one, taped it with packing tape, and punched the holes!

## Make your own template!

A really neat idea by Kerri. Mark your own dots on cardstock, tape it with packing transparent tape to make it sturdier and then punch the holes with a thick needle. Brilliant, thank you Kerri!
