

Windows Server Storage

Configure Disks and Volumes

Objectives:

At the end of this episode, I will be able to:

1. Configure disks and volumes.

Key Points:

Explain the differences in an MBR and GPT partition.

List and describe the steps for creating a new volume.

Compare and contrast NTFS and ReFS.

In which situations should you change the allocation unit size from its default setting?

Explain the usage of the diskpart tool and its options.
