

Multi-site, Multi-domain, and Multi-forest Environments

Deploy a Child Domain

Objectives:

At the end of this episode, I will be able to:

1. Configure and manage forest and domain trusts.

Key Points:

Which role must be installed to promote a server to a domain controller and create a child domain?

List the deployment options you should choose on the Deployment Configuration screen of the AD DS Configuration Wizard to create a child domain?

Which AD tool should you use to view the trust between a parent and child domain?

Discuss how to view the trusts that a domain has in Active Directory Domains and Trusts.

Discuss how to view the properties of a trust in Active Directory Domains and Trusts.
