

Active Directory Domain Services (AD DS) Domain Controllers

Transfer FSMO roles using PowerShell

Objectives:

At the end of this episode, I will be able to:

1. Troubleshoot flexible single master operations (FSMO) roles.

Key Points:

Explain what the following PowerShell cmdlets will return.

Get-ADForest | Select-Object DomainNamingMaster, SchemaMaster

Get-ADDomain | Select-Object InfrastructureMaster, RIDMaster, PDCEmulator

Discuss other PowerShell cmdlets for transferring FSMO roles.
