

Simplify the code

This code could be simplified, can you tell how?

```
<?php
    session_start();
    require('system.ctrl.php');

    //check if session uid exists and not empty
    if (isset($_SESSION["uid"]) && $_SESSION["uid"]!="") {
        //empty session uid
        $_SESSION["uid"]="";
        header('Location: index.php');
    }else{
        header('Location: index.php');
    }
?>
```

HINT:

Focus on the **else** branch. We have the same line of code in both branches. That's not necessary.
