

Before, After and Between  
Number Finder Instructions

**\*This is for an adult to prepare\***

For extra durability, print the number finder onto thin card.

Separate the 'Before, After and Between' number finder from the number chart above, and cut along the dotted lines to create a window and two flaps in the middle.

The number finder has been designed to fit neatly over each number on the chart, so you can place the finder directly over the top of the numbers on your chart. There is also the option of creating a slit at each end of the finder (indicated in yellow on the image), and separating each row of the number chart to turn it onto one long strip.

Before, After and Between  
Number Finder Instructions

If you feed the strip into each slit that you have made, you can create a sliding number finder.
