2020 Module 1: Progress Check 1

Chemistry

**General
Instructions**

- Reading time – 3 minutes
- Working time – 30min
- Write using black pen
- Draw diagrams using pencil
- Calculators approved by NESA may be used
- A formulae sheet, data sheet and Periodic Table are provided at the back of this paper

**Total marks:
15**

Section I – 5 marks

- Attempt Questions 1–5
- Allow about 9 minutes for this section

Section II – 10 marks

- Attempt Questions 6–8
- Allow about 18 minutes for this section

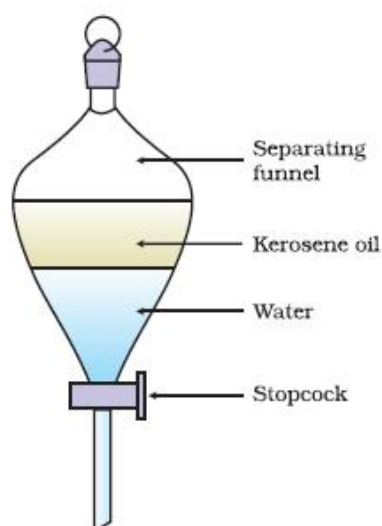

Section I, 5 marks

Attempt Questions 1–5 Allow about 9 minutes for this section

- 1) Which of the following correctly identifies a list of substances that are homogeneous?
 - a) Sugar, aluminium foil, black coffee and paint
 - b) Salad dressing, aluminium foil, alcohol and soil
 - c) City air, sugar, sugar water, paint and iron
 - d) Black coffee, aluminium foil, iron, alcohol and saltwater

- 2) Which example mixture stated below would use distillation to separate into separate components?
 - a) A mixture of lead shot and aluminium pellets
 - b) A mixture of water and olive oil
 - c) A mixture of liquid heptane (B.P 98°C) and liquid heptanol (B.P 176°C)
 - d) A mixture of sugar and iron filings

- 3) A student saw the following piece of equipment in the lab. She examined it and came to the conclusion that the main property of the mixture being used to separate the components was?

- a) Particle size
- b) Boiling Point
- c) Density
- d) Colour

Section I, 5 marks

Attempt Questions 1–5 Allow about 9 minutes for this section

- 4) Ben wanted to make some copper sulfate crystals. He started by reacting copper oxide with sulfuric acid. This produced copper sulfate in solution and left some solid excess copper oxide in the test tube.

He then used the technique X to remove the copper oxide and then used the technique Y to reduce the volume of the solution down by half. The last step was to use technique Z to form the copper sulfate crystals.

Which of the following correctly identifies techniques X, Y and Z with the correct physical separation techniques?

- a) Technique X = distillation, technique Y = decantation and technique Z= evaporation
 - b) Technique X = filtration, technique Y = decantation and technique Z= evaporation
 - c) Technique X = decantation, technique Y = filtration and technique Z= evaporation
 - d) Technique X = filtration, technique Y = evaporation and technique Z= evaporative crystallisation
- 5) A haematologist was testing blood and was required to separate out the blood cells from the plasma (liquid that carries the blood cells) as this liquid contains the blood proteins, glucose, hormones and dissolved ions. In order to do this separation, she needed to use which technique?
- a) Distillation
 - b) Centrifugation
 - c) Evaporation
 - d) Electrophoresis (advanced sieving technique to separate a mixture of proteins)

Section II, 10 marks

Attempt Questions 6–8 Allow about 18 minutes for this section

6) Define the following terms and identify the separation technique it is relate to: (6 marks)

i) **Miscible liquid:** _____

Technique:

ii) **Immiscible liquid:** _____

Technique:

iii) **Filtrate:** _____

Technique:

iv) **Distillate:** _____

Technique:

v) **Homogenous:** _____

Technique:

vi) **Heterogenous:** _____

Technique:

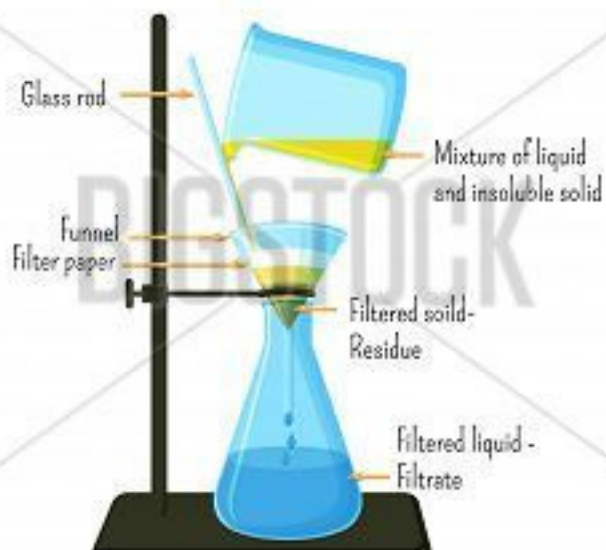

Section II, 10 marks

Attempt Questions 6–8 Allow about 18 minutes for this section

7) Label the diagram for this technique.

Standard atomic weights are abridged to four significant figures.

Elements with no reported values in the table have no stable nuclides.

Information on elements with atomic numbers 113 and above is sourced from the International Union of Pure and Applied Chemistry Periodic Table of the Elements (November 2016 version). The International Union of Pure and Applied Chemistry Periodic Table of the Elements (February 2010 version) is the principal source of all other data. Some data may have been modified.
