

**In this week's course, the student will understand that** when counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object. Understand that the last number named says the number of objects counted and they will revisit the idea of adding one more but this time they will look at number sequences and objects.

This week will be **FUN**, *engaging*, and **exciting**. We will learn and become great mathematicians together. We will work hard and do our very best! Remember it's NOT magic, its math!

### **What you'll be learning to do during week 3:**

- **Count objects one by one.**
- **Count objects and identify how many in the set.**
- **Name what number will come next in a sequence.**
