Feedback - Global issues and opportunities Speaking

Student:

Score:

Band	Fluency and Coherence	Lexical Resource	Grammatical Range and Accuracy	Pronunciation
	How your words, ideas and thoughts flow together, using a range of words and phrases to connect and organize your ideas, help you move on to another point, etc.	The kinds of words you use, whether they help make your ideas clear, and whether the words are understandable, appropriate, and relevant to the topic.	Number of errors – the number of grammatical errors you make (e.g., articles, prepositions, subject/verb agreement)	- How well you are understood: how easy it is to understand you, and how clearly (and correctly) you pronounce words. -How you use stress and intonation to emphasize important words and ideas and the use of stress to contrast ideas.

Example:

Would you like to work in a company related to environmental protection?

I would love to work for an environmentally conscious organization that uses sustainable practices to protect the environment. Climate change, global warming, air pollution, water pollution, waste management, and other environmental issues face our world. Natural calamities, such as earthquakes, tsunamis, and cyclones, have become all too common in recent decades. Everyone, in my opinion, should actively participate in environmental protection.

How can we protect the environment?

Do you think you have done enough to protect the environment?

Is there education about how to protect environment at schools?

- alternative energy
- moral obligation
- reusable bags
- recycle
- composting
- carpooling
- reduce CO₂
- conscious
- energy saving gadgets

Speaking Part 3

Write a complete response (2-5 sentences) to the following Part 3 questions.
Use the words on the right to assist you.
Read your response aloud until you are fluent or speaking without hesitation.
You don't have to memorize just be fluent.

Example:

Why is it important to protect the natural environment?

The natural environment is probably the most important resource around us as it pretty much protects and governs our lives by providing us with whatever we need to survive. It provides us with food, water, oxygen, power, energy and many, many other things. It also helps us to live a healthy life by clearing the pollution of our atmosphere. Finally, it is important to protect the natural environment around us in order to maintain the biodiversity (having varieties of plants and animal species) for the overall well-being of our planet. Our very existence in this world is dependent on the natural environment we live in. So we should take every step possible to protect it for our own survival.

technology
AI (artificial intelligence)

What environmental problems are common in your country?

What can the government in your country do to deal with those problems?

What technological innovations should the world develop to protect the environment?

Do you think the youth these days care about the environment? Why do you think so?

*Environmental problems are too big to be dealt at the individual level?
Do you agree? Why/Why not?*
