

# Generics

# Takeaways

Use the same code on many (potentially unrelated) types:

```
trait List[T] {  
  def add(elem: T)  
}
```

Generic methods

```
object List {  
  def single[A](element: A): List[A] = ???  
}
```

Multiple type parameters

```
trait Map[Key, Value] {  
  ...  
}
```
