

Weekly Challenge

Razor Pages Form

Primary Challenge

Create an ASP.NET Core Razor Pages application. Create a Sign Up page that captures a First Name, Last Name, Email, and Password. Verify the values are captured upon submitting the form. Capture all values in one class object.

Bonus Challenge

Create a Thank You page that you redirect to after form submission. Pass in an ID (simulated). Also, on the Sign Up page, accept a Mode value of Light or Dark as a query parameter and change a message on the page accordingly (“This is Dark Mode” or “This is Light Mode”).

“Practice makes the master.”
